

Impact *COVID and Global Tourism*

Task 1 - PQE: Distribution of Vaccinations across the world

Pattern - In general, majority of the Western World and East Asia have high levels of vaccinated individuals, most first world countries have high levels of vaccinated individuals.

Quantification - The Group of 7 (G7, Including Canada, France, Germany, Italy, Japan, U.K and the United States) averaged approximately 76.71% Vaccination rates. According to the WHO, the G20 averaged 70%. These data sets provides good statistical significance in relation to approximate quantification of the West and East Asia as a whole.

Exception - An exception to this pattern is the United Arab Emirates, which is not directly in the West or in East Asia, yet in general has high levels of vaccinated individuals.

Task 2 - Impacts of COVID-19

Social:

- Education
- Public Safety
- Mental Health
- Healthcare
- Transportation
- Public health
- Illness/loss of health
- Lockdown
- Racism

Economic:

- Employment
- Housing
- Business
- Tourism
- Lockdown

Environment:

- Environment

Political:

- government

Task 3 - How reliant are countries on tourism?

8.7% USA

16% Fiji

8.19% Australia

Fiji clearly has the dominant lead in terms of % contributed by tourism exports, with more than double the other nations. However, pre-covid, Fiji was at around 40%. What this shows is that, there is a large reliance on exports.

Task 4
